Subject: Application 2023/01/SWP

[CAUTION: This email originated from outside of the organisation.]

I am writing to raise objections to the above applicaton from ETGAS on the following grounds:

- 1.The byproducts of this nature will only intensify the problem with lack of clean air especially as we are in close proximity to the proposed site.
We already experience particles in the air from the existing site not to mention the repulsive smells omitted.
We all have a right to clean air and a better quality of life and this proposal will remove that right.
2. Additional vehicular access will obviously be increased to the large number that currently exists resulting in more fuel emissions.

In view of the above points please decline the application.

Regards
