Subject: LCC/2023/0024

Dear Sirs

I'd like to place an objection against planning application LCC/2023/0024 for the construction and operation of an embedded waste fuel gasification and combined heat and power generation facility, utilising densified waste derived fuels at Hapton Valley Transfer Station, Hapton Valley Estate, Accrington Road, Burnley.

The reason for the objection is based on health concerns for residents living in the surrounding area. As Borough Councillors for Hapton with Park, my colleagues and I have received numerous emails and telephone calls about this proposal and the potential detrimental health impact if it goes ahead.

My view is there is the potential for emissions violations if this proposal goes ahead, which will result in health implications for residents. This site has previously breached planning conditions due to a failure to install a required dust extraction system set out in the conditions of a planning application. There is also the potential for increased levels of exhaust emissions coming from the higher number of trucks which will be visiting the site.

I have also sent the above to LCC as a separate objection.

Kind regards
