Planning application ETGAS 2023/01/SWIP

We live [REDACTED] and want to oppose the planning application for the following reasons. There have been several fires on this site within the last few years. These have caused extensive air pollution, the need for the emergency services to be utilised in an already stretched service, roads to be closed and an inconvenience to many. Due to the number of fires this suggests that procedures, legislation and Health and Safety laws are not being adhered to. This raises concerns that with the addition of a new incinerator there will be further and possibly more serious fires and consequences for the local residents and area.

In addition to this, we already have periods of air pollution from the site, a really bad smell and airborne emissions which impact on our right to clean air and resulting in the need for closed windows and staying indoors. This of course also affects the wider community including the cemetery and crematorium.

In conclusion we oppose this application based on Health and Safety grounds, public and local community welfare and environmental pollution.

In view of the points raised above we recommend that you refuse the application request.

Regards

[REDACTED]
